

UNDERWATER LED LIGHT LTL-3300

Mariner Underwater Light LTL-3300

Our LTL range of lights features the latest led technology. These lights are extremely rugged and shock resistant and their performance, measured vis-à-vis lamps with incandescent bulbs, is exceptionally better.

An additional advantage is the amazing life time expectancy of our underwater led lights which can reach the astonishing limit of 50.000 hours. Also most importantly our LTL-3300 generates light output comparable to that of a 350Watt halogen bulb, by driving only 50Watts of power. Finally the housing, which is made of aluminium 6061-T6, offers corrosive resistance and allows extensive use in harsh conditions.

We can modify each model according to the client's preferred specifications, regarding power, voltage and light output.

MODEL: MARINER LTL-3300

ELECTRICAL

Operating Voltage	22 - 30 V.DC
Operating Current	2,2 Amp/24 V.DC
Luminous Flux	2.925 Lumens
Light Color	5.500 ° K Typical

MECHANICAL

Housing Material	6061 - T6 Aluminium
Housing Finish	Hard Anodized
Depth Rating	2000 msw
Connector	3 Pin MCBH3M
Window	Acrylic
Length	115 mm
Diameter	70 mm front - 62 body
Weight in air	0,6 Kg
